

Invitation to Quote: *Path Upgrades at Bwlch Corog*

1. The wet ground leading down from the education area to the Celtic rainforest

Aim: Divert the water from the path

Options include installing a culvert; installing steps and drainage; edging

2. The steep, rocky path down through the woods towards the river

Aim: To reduce the gradient of the slope.

Install steps where needed. Will need to drill supports into rock here.

3. The very steep rock down to the river

Aim: To allow safe access down to the river

Either install a ladder (approx. 4m) and hand rail, or divert the path using log edging, steps and handrail. Supports will need to be drilled into rock.
